

Press release: Hermann-Rietschel-Institut auf der cleanzone

Air hygiene is a main point of focus in the research activities at the Hermann Rietschel Institute. Concepts for minimizing the concentration of chemically, biologically or physically harmful contaminants are developed especially for rooms with certain needs of protection. Dispersion and sedimentation of particulate matter is investigated numerically and experimentally. At the cleanzone expo, different photographs and videos of flow visualizations among other results of completed and current research projects are shown.
